Epicor Smart Operational Analytics

EPICOR.

Product

▶ Epicor® ERP

Benefits

▶ Increase operational efficiency

▶ Improve supplier collaboration

▶ Measure inventory costs and performance in real time

Identify root causes of operational inefficiencies, benchmark service levels, and assess supplier performance

What is my inventory position today, on any item? Where are we stocking out, and how often does it happen? What are my delivery times? Why did we ship late? Do we have too much inventory in one location, not enough in another? What are my real supplier lead times?

The answers to these common questions reveal underlying root causes that, when resolved, can improve supply chain performance. However, this information is often locked up and only accessible through limited reporting views or spreadsheets.

Cloud-based operational analytics

Epicor Smart Operational Analytics is a cloud-based reporting platform that provides a fast, easily understood, current perspective on the state of your inventory. It performs against critical metrics, actual supplier lead times, and opportunities to rebalance stocks across facilities to help uncover root causes of operational inefficiencies.
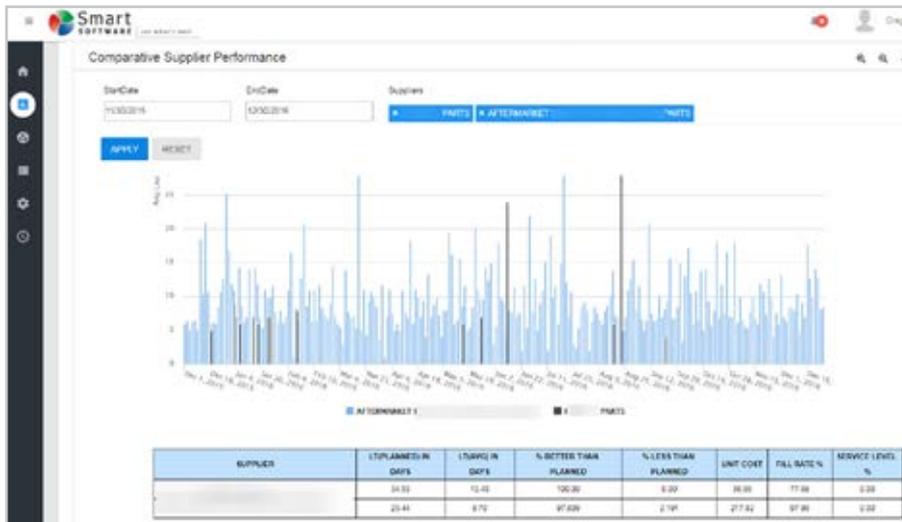

Features

Inventory analytics

A 360-degree view of your inventory—identify value, stocking trends, overstocks, understocks, and potential order cancellations. Identify root causes of stock-outs, excess inventory, and late deliveries. User-defined filters enable the ability to drill into and report on any subset of the inventory.

Visualize your inventory metrics through dashboards and share with key stakeholders

Supplier analysis

Get comprehensive insight on your suppliers by measuring historical performance and lead times, which allows you to rank suppliers across different metrics and identify trends over time.

Easily monitor and compare your supplier's performance

Operational performance

Improve your operation by measuring key metrics such as service level and fill rate performance, time to ship, number of stock-out events, turns, and holding and ordering costs. Share key performance indicators (KPIs) such as service levels, turns, costs, and more across the organization.

Monitor your inventory performance to uncover root causes of operational inefficiencies

Integration to Epicor ERP

Epicor Smart Operational Analytics seamlessly integrates with Epicor ERP software using an "out of the box" connector that simplifies implementation and support. The integration allows users to:

▶ Auto-import historical shipments, orders, receipts, on hand, costs, and more

▶ Schedule daily or more frequent data uploads

Epicor Smart Platform

Epicor Smart Operational Analytics is part of the Epicor Smart Inventory Planning and Optimization Platform, which is an integrated set of supply-chain web applications including Smart Demand Planner, Smart Inventory Optimization, and Smart Operational Analytics. Smart platform's common data model and its Epicor ERP integration enables an easy implementation of the other modules when licensed. You can start with Smart Operational Analytics to help assess and track operational performance, and simply sign up and turn on Demand Planner and Inventory Optimization whenever you are ready. No new data acquisition efforts are necessary.

Powered by Smart Software

Founded in 1984, Smart Software is a leading provider of enterprise demand forecasting, demand planning, and inventory optimization solutions. Today, hundreds of organizations—including global leaders and cutting-edge small to medium businesses around the globe—use their solutions to plan for demand, optimize inventory, and drive a more efficient supply chain. Smart Software provides analytical planning solutions that help customers to generate a significant economic return for their business.

About Epicor

Epicor Software Corporation drives business growth. We provide flexible, industry-specific software that is designed around the needs of our manufacturing, distribution, retail, and service industry customers. More than 40 years of experience with our customers' unique business processes and operational requirements is built into every solution—in the cloud or on premises. With a deep understanding of your industry, Epicor solutions spur growth while managing complexity. The result is powerful solutions that free your resources so you can grow your business.
